Notebook 12

Date: 5/6/2025

Objectives:

1. Finish the mock demo

Record of Work:
Today was the big one—our final presentation. Honestly, walking in we were a little on edge, but mostly excited to finally show off what we've built. After all the late nights, scrambling to fix PCBs, and debugging code right before deadlines, we made it.

The presentation itself went really well. Everyone on the team did a solid job explaining their parts. We covered all the main components—control system, power, mechanics—and kept the flow going smoothly. It felt good to finally talk about everything we've done, not just the technical stuff but the actual impact this could have.

The professor gave us useful feedback—some ideas for better security features and suggestions on how to make the system more user-friendly down the road. But overall, it was clear she was impressed with how far the project had come. That felt really good to hear. After we wrapped up, we all just kind of looked at each other and let out a breath. We're done. It's been a wild ride, and seeing it all come together like that made everything worth it.
